

## Telephone Line Monitor

(Item No. 1150)

This unit is a tool used in the maintenance or installation of automatic dialing equipment. It is connected across the telephone line and gives a visual display and audible indication of what is happening on the line.

The LCD display indicates:

- ON/OFF hook status
- Hook-flash
- Dial tone
- DTMF digits dialed

## Telephone Line Simulator

(Item No. 1160)

The unit is similar to the Telephone Line Monitor, but has the ability to simulate an exchange line. The allows equipment to be tested before connecting to the telephone network.

## Operators Training Module

(Item No. 1112)

Allows a Supervisor to monitor an Operators call without interference, for training purposes.
