

Queue Display Unit

(Item No. 1080)

Features:

Visual Indication of Queue Status
Selectable Audible Alarm on Red
Plugpack Powered
Easy Installation

A number of PABX systems have the ability to display a crude call waiting status for their Queue or ACD facility.

This is achieved by programming a LED on a System Integral Handset. The states being:-

- OFF (no calls waiting)
- ON (1 or more calls waiting)
- FLASHING (More than a preset number of calls waiting)

A detector is placed over this LED and converts the flash rates into Green, Amber and Red lamp displays. A selectable audible alarm can be selected for the Amber and Red states.

The unit is powered by a 12 Volt plugpack and is simple and straightforward to install.

Dimensions: 190mm x 110mm x 60mm.
