

## Line Interface Unit

The Line Interface Unit is an ACA approved interface.

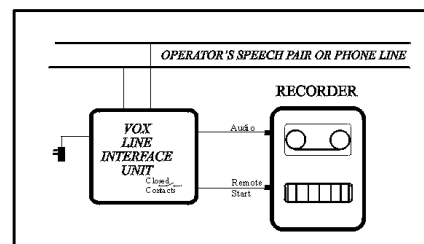

It is connected in parallel with the telephone line and can be used for systems such as the Bomb threat Recorder. (Item No. 1110)

## VOX-Line Interface Unit

The VOX Line Interface Unit is similar to Item No. 1110 but is powered by a plug pack and monitors the line for voice activity. When an audio signal is on the line a relay contact is closed. This contact can be used to activate a recorder or similar device.

(Item No.1111)

## Recorder Connector Unit

The Recorder Connector Unit is used to record conversations on a digital (System Integral) telephone handset.

The connection is made at the analogue point of the phone.

The Unit is connected between the handset Transmitter/receiver socket and the Transmitter/receiver.

An RCA socket feeds the output signal to the recorder.

(Item No. 2510)
